

The POLYTOUCH® CURVE manages, verifies and authorizes access to medical facilities using multi-factor authentication, without direct contact with the user.

The CURVE has a scanner for ID documents, a specialized camera, and a RFID reader/writer to check ID and biometric data. This process automates access management and ensures compliance with the highest security and hygiene standards.

Thanks to its modular design, the CURVE can be optionally equipped with a camera to measure body temperature via the iris of the eye. This empowers you to interrupt the chain of infection preventively, minimizing the risk of infection for your staff, your patients and your visitors.

### Highlights - CURVE 32

- Futuristic design
- 32" full-HD touch display
- Alternative screen sizes available
- Plenty of space for additional peripheral modules
- Suitable for numerous use cases

# POLYTOUCH® E-Health Solutions

**PYRAMID**

The Hospital Future Act (KHZG) is prescribing the German healthcare system a digitalization boost. The goal is to ensure high-quality healthcare. This requires advanced technological concepts.

In cooperation with selected partners, Pyramid supplies medical providers with modern and powerful POLYTOUCH® brand kiosk systems for self-service in the healthcare sector.

They speed up patient registration, simplify waiting time management, and support navigating from one point of care to the next. Our terminals can also accept meal orders, convert documents from paper to digital format, or add credit to patients' healthcare cards.

Would you like to start digitalization your medical facility or expand or modernize an existing infrastructure?

Then POLYTOUCH® is the first choice for you! Take the decisive step towards more patient satisfaction, more staff relief and more process efficiency with POLYTOUCH®.

Our team will be happy to analyze your needs and advise you regarding the look, feel and functionality of your future e-health solution.

POLYTOUCH® terminals are not standard products out of a catalog, but offer maximum modularity to meet the specific needs of every medical provider.

The DISEPO 2.0 (Digital Service Point) is a complete solution comprising hardware from Pyramid and software from DeGIV. As a multifunctional end device, it can accelerate a variety of processes in clinics, rehabilitation centers, medical practices or pharmacies. Your patients or customers can perform administrative tasks on their own on the DISEPO's large 32" touchscreen, eliminating long wait times. The terminal is as easy to use as an ATM. In a hospital, the DISEPO combines patient admissions with numerous other services for the first time, and establishes direct contact with health insurance companies, local authorities and healthcare providers.

### Highlights - DISEPO 2.0

- Identification of persons via biometrics
- Legally valid acceptance of declarations of intent
- Access to telemedical advice and care
- Access to electronic health records

Our POLYTOUCH® FLEX21.5 HEALTHCARE is the patient terminal for managing admission, treatment, transfer and discharge. We have equipped the compact and space-saving FLEX with all the peripheral modules required for smooth self-check-in and self-check-out: card reader, document scanner, signpad, holder for disinfectant dispenser, and screen with privacy filter. The almost frameless and super-flat touch display in portrait format gives the FLEX the look and feel of a tablet. This creates a familiar usability for your patients that makes self-service inviting to all generations.

### Highlights - FLEX21.5

- Ultra-compact
- Tablet-oriented look and feel for familiar usability
- Highly integrated design
- Ergonomic arrangement of the peripheral modules
- Minimal interaction area

In a pharmacy, patients can use the POLYTOUCH® PASSPORT 32 to pay for non-prescription items, while in a hospital, they can order a meal, pay for optional services, or ask for the quickest route to a specialist department. This is how the PASSPORT can relieve your staff of mundane tasks, giving them more time for nursing and caring. The PASSPORT's large 32" full-HD touch display is particularly suitable for the clear and user-friendly display of extensive and complex software applications. In the dual-display version, the elegant PASSPORT serves two patients simultaneously.

### Highlights - PASSPORT 32

- Slim design and small footprint
- In-house AKHET® industrial computer
- Plenty of space for additional modules
- Tool-free installation
- Maintenance-friendly thanks to easy peripheral access
