POLYTOUCH®

Travel & arrive relaxed

The **POLYTOUCH® NEO 21.5** answers guests' questions in the lobby and in the common areas on the floors. Its store of knowledge is the digital house folder.

The NEO presents the answers in the form of text panels, videos and images. Its 21.5" full HD touchscreen brings the information to the guest in razor-sharp clarity and brilliant colors. A few operating gestures are all it takes to access the desired content.

The terminal is not just functional! With its ultra-modern and ultra-flat display panel (4 mm), the NEO looks great in any accommodation.

Highlights - NEO

· 21.5" full HD touchscreen
· Panel profiles made of aluminum or real wood
· Can be used as wayfinding and advertising system
· Optional ADA modul

PYRAMID

In the travel and mobility sector, there is a great need for self-service solutions, both for passengers and transport services providers. Pyramid provides these solutions in cooperation with selected software partners.

POLYTOUCH® kiosk systems already provide superior services at major international airports: If you have ever taken off from Milan or Berlin, you've probably used a POLYTOUCH® kiosk for self-service check-in and baggage check-in, and experienced how easy it is to use our solutions.

POLYTOUCH® ticketing kiosk systems are also used in public transit. They help clear bottlenecks at ticket counters and ensure speedy ticket sales. Your passengers will be happier, and you can offer additional services during off-peak hours or even around the clock – without additional staff.

The utility of POLYTOUCH® kiosk systems also extends to freight transport. Freight documents are easily converted into digital format by the truck driver directly at the time of delivery and then quickly transferred to the enterprise software system for further processing.

If you want to set up, expand or modernize a self-service infrastructure in your transit system or freight forwarding company, POLYTOUCH® is your first choice!

Take the decisive step towards more travel comfort, accelerated procedures, higher sales and lower costs with POLYTOUCH®.

POLYTOUCH® has developed an outdoor solution for ticket purchasing in public transit for its software partner AMCON. With this terminal, AMCON prevailed in a Europe-wide tender over numerous market competitors. The POLYTOUCH® kiosk system is now used outdoors at ferry piers as well as at bus stops in urban areas.

The POLYTOUCH® systems for AMCON are characterized, among other things, by their compact construction, a 32" touchscreen and modern design. The large display is ideally suited for the clear presentation of ticketing information as well as additional passenger information, such as departure or timetable information.

Highlights - OUTDOOR

· In-house AKHET® IPC technology
· In-house faytech® touch technology
· 32" Full HD touchscreen
· Weather resistant
· Easy installation and serviceability
· Software platform AMCON.POS

POLYTOUCH® and Materna IPS present the latest generation of PAX.GO. These terminals are automating passenger check-in at major international airports, enabling passengers to check in and check in their baggage in self-service.

The POLYTOUCH® PAX.GO is a futuristic-looking kiosk system that can be equipped with a display from 19" to 32" depending on the use case. Since the PAX.GO has plenty of space for peripheral modules between its two support columns, it can be easily and cost-effectively converted and upgraded when new or changed processes are required. A PAX.GO grows with you and always looks good.

Highlights - PAX.GO

· Futuristic design
· Different touchscreen sizes
· Small footprint
· Very high modularity
· State-of-the-art biometric technology
· AKHET® industrial computer

With its compact dimensions, the POLYTOUCH® FLEX21.5 Check-in fits into the foyer of any hotel, hostel or motel. The terminal is operated via a thin, almost frameless touch display with the look and feel of a tablet. The familiar usability invites all generations to self-service.

The FLEX21.5 check-in is available in a PRO version that authenticates data from electronic ID cards and driver's licenses.

With the FLEX lite, we've taken minimalism to the extreme. It may not fit in a vest pocket, but it will fit in the tiniest foyer.

Highlights - FLEX21.5 Check-in

· For check-in and check-out in self-service
· Tablet-oriented look and feel
· Epson 80 mm thermal printer
· Metriax R-571 card dispenser (up to 250 cards)
· Payment Verifone, Ingenico, Pax and others
· Thales Gemalto Document Reader AT10K (PRO)
