

The extremely compact POLYTOUCH® FLEX21.5 kiosk terminals are the ideal solution for any restaurant where space is at a premium and every square inch counts.

Your guests will love self-ordering on the small FLEX. The almost frameless and super-flat touch display in portrait format gives the kiosk the look and feel of a tablet. This gives guests a familiar experience that makes self-ordering a real pleasure. The FLEX looks great as a pedestal, wall-mounted or countertop version.

And with the FLEX lite we've taken minimalism to the extreme. It might not fit in your back pocket, but it will fit in even the smallest restaurant.

Waiting can't always be avoided, but queuing can! Our PLS paging and localization solution provides your guests with a modern and convenient service experience. Keywords: guest call and guest localization. In addition, the PLS automates the processes in your quick service or fast casual restaurants.

Pyramid has extensive expertise in paging and localization. With the PLS, we have created a holistic concept that combines reliable performance, high user-friendliness and great flexibility in configuration and integration into existing self-service infrastructures.

The PAGING and LOCALIZATION packages cover a wide range of use cases in system catering.

- Immediate tracking of position changes
- External puck dispenser available in two sizes
- Alternative: Puck distribution via PASSPORT 32 kiosk

PYRAMID SOLUTIONS WORLD
 3 brands for the entire digitalization flow

With POLYTOUCH® both you and your guests will get the benefits! Our kiosk terminals mean your guests spend far less time waiting to place their orders. This makes your restaurants much more attractive to visitors.

More footfall in your restaurants means more revenue, which is boosted even further by upselling at the terminal – by an average of 30% per order compared with upselling at conventional checkouts.

Are you looking to build, expand or modernize a self-service infrastructure in your restaurants? Then POLYTOUCH® is your first choice! Take the decisive step towards more customer experience, higher sales and lower costs with POLYTOUCH®.

The future-proof self-service of POLYTOUCH® technologies are long-term assets that guarantee a high return on investment. Our space-saving terminals make optimal use of your floor space and enable profitable upselling opportunities.

Their elegant design invites your guests to the convenience of self-service. With POLYTOUCH®, your guests get appealing and easy-to-use kiosk solutions that optimally fulfill their desire for a modern digital ordering and payment process.

What you should also know: POLYTOUCH® terminals can be easily and cost-effectively adapted to any use case.

At Pyramid Computer, we have many years of experience in the field of self-order terminals. An industry giant in QSR relies on POLYTOUCH® technology. Trust us too!

One POLYTOUCH® PASSPORT brings two kiosks to your quick-service or fast-casual restaurant. This gives you double the capacity to take and pay for orders in one fell swoop.

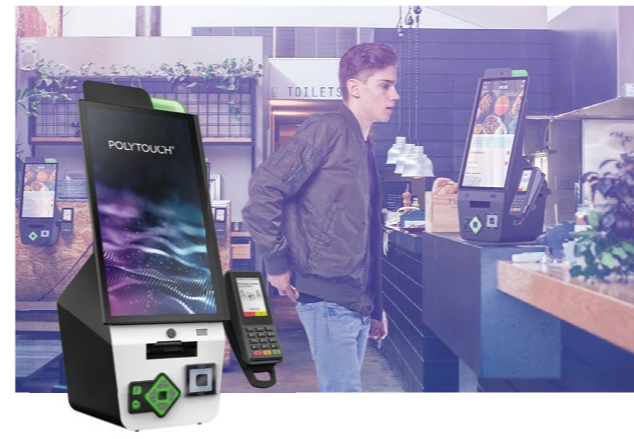

With its slender chassis, the PASSPORT 27 takes up very little space, making it easy to fit into even the smallest restaurants.

The PASSPORT 32 is a prime example of a kiosk system that can be easily retrofitted with peripheral modules. There is plenty of space in the console and display frame. This means cost-efficient adaptation of the terminal to specific use cases.

For those who can do without dual power, the systems are also available as a single standalone or wallmount variant.

Highlights - PASSPORTS

- Slim design
- In-house AKHET® PC-Box
- 2 kiosks in 1 system
- 27" or 32" full HD touch displays
- Tool-free installation (PP 32)
- Maintenance-friendly thanks to easy peripheral access

The POLYTOUCH® PIXI15.6 is probably the smallest all-in-one kiosk system in the world. Our entry-level terminal or franchise restaurants fits on one sheet of paper. The terminal's ultra-compact format and wall-mount and countertop installation options make it easy for you to provide a great deal of self-service power.

Precise recognition of up to 20 simultaneous touch gestures and the display's low delay rates make ordering a breeze.

We have accommodated the PIXI's mainboard with a powerful Intel® Alder-Lake N97 CPU and peripheral modules in its powder-coated steel chassis. Thanks to integrated NFC (optional), the scanner can also read information stored on loyalty, membership or bonus cards.

Highlights - PIXI15.6

- Ultra-compact: footprint 230 x 193 mm
- Forms a product line with POLYTOUCH® SWIFT
- All-in-one terminal
- Extensive optional equipment available
- Easy installation and maintenance
- Compatible with Pyramid Paging & Locating System

The POLYTOUCH® SWIFT completes our entry-level product family for franchise restaurants. This terminal adheres to the same design and hardware concept as the PIXI. It is the ideal complement or alternative to its little brother.

The basic version of the SWIFT includes a full-HD touchscreen, printer, scanner with optional NFC, status light, and a holder for your preferred payment module.

With a footprint of just 42 × 27.5 cm, the SWIFT conserves the resources of your valuable space. Of course, despite its compact dimensions, the SWIFT still has room for optional modules. The terminal is available with a 24", 27" or 32" touchscreen from our faytech® brand.

Highlights - SWIFT

- In-house AKHET® PC box (Alder Lake-N)
- Two-handed installation = less manpower required
- Simple assembly principle = short installation time
- Maintenance-friendly due to easy peripheral access
- Payments from various manufacturers can be integrated
- Small footprint (42 x27.5 cm)

The T-OLED kiosk from faytech® brings technology of the future to self-checkout and self-ordering in your space.

The ultra-flat (7mm or 0.3") and semi-transparent touchscreen will draw your customers and guests to the terminal and ensure higher sales through cost-efficient self-service.

Spectacular: When operating the terminal, users not only look at the UI, but also at your restaurant or store space behind it. This creates the ultimate "aha" experience during self-service and strengthens your brand's reputation.

Another benefit: The OLED technology and aluminum housing make the system a lightweight, decreasing the installation effort.

Highlights - T-OLED KIOSK

- 30" T-OLED touch screen
- Contrast 135.000 : 1
- Intel Atom® x6413E (Elkhart Lake)
- Super compact terminal
- OS Debian 12, Linux or Windows on request
- Total weight ca. 42 kg (93 lbs)
